The build-out of this 4,200 square foot building required a complete interior gut and substantial exterior demolition of this former bank, originally constructed in 1974.

Work included a new exterior canopy and drive up ATM areas, a new roof, expanded main entry, new windows, pavement and landscaping at the site. The interior of the bank was built-out to include teller stations, three offices, secure vault areas, alarm and security systems, kitchen and bathroom spaces.

With its location on a busy stretch of road at 980 Massachusetts Avenue, a temporary sidewalk and fence screening system was utilized to ensure site safety. The local retail area draws extensive pedestrian and vehicular traffic which necessitated extra caution with construction traffic flow and site deliveries.

The new, full-service branch bank includes drive-up teller windows and drive-up ATMs.

*“This is the bank's third project with RWS and we are delighted again with all aspects of their effort. The project was completed on time and under our budget expectations with excellent project management and site supervision by the White team. We are looking forward to completing the next branch bank with them.”*
